I first got a realizing sense of my own personality or individuality when, a boy about 8 years old, I was at work on a hillside on the farm of Tristram Burgess near Providence R.I. My father was the manager of this farm, and my business that sunny afternoon was to chop up and dig out by the roots all the Canada Thistles I could find in the pasture. I had read the Bible through - verse by verse, also Robinson Crusoe, Deerslayer, and the Pathfinder, and the Pilgrims Progress - but I had never done any thinking that I can remember. - But on this memorable afternoon I stood on the hillside and looked over Narragansett Bay, and wondered where all the Cat boats and Schooners with their white sails came from, and were going to. Then my thought took this turn - "The only person who can know that is God. He knows everything that has been, and is, and is to be. Then hundreds and thousands of years ago he knew that I should be here to day and that each of those boats would be just where it is, and that I should be thinking of them." Then as his knowledge must have been perfect it is absolutely necessary that I,

just I am, knowing just what I know, am here at this moment, looking at these ships, which also must be each just where they are,

then everything must be arranged and ordered to be just as it is, and no one can prevent it. Therefore I am not responsible for where I am nor for what I do."

I was surprised at this conclusion, and thought I had made a great discovery, and resolved to tell my mother about it when she was worrying about our troubles.

I did tell her about it that night, and said that there was no use in worrying any more.

She looked at me in a scornful sort of way and said "Who's been teasing you about preordination?" "Nobody taught me," said I. "I found it out by myself — don't you see it must be so."

My life on the Burgess farm, farm  
about 5 to 10 years of age, was that  
of an ordinary farmers boy. I ~~cannot~~  
leave the mill cut into Providence about 5  
A.M. and left the pigs and goats with  
the various customers - mostly of the  
lower class. I dropped four of five grains  
of sweet corn in the proper place in the furrow  
in planting time. I helped weed the little  
Carrots and young beets, rode the horse  
for the horse raking of the hay crop, went  
to a country school for three months in the  
winter, made little clam bakes along the shore  
with my cousins William Henry and Charles  
Shaw, and read everything I could lay hands  
on. I managed to get a dollar for subscription  
to a little lending library in a book shop,  
and the first books I took out were Deerslayer,  
Pathfinder, and Jack o' the Mill.  
I had for my own Robinson Crusoe, Marco  
Paul in the forests of Maine, Harry and Lucy,  
and Plutarch's Lives and was quite sure  
that I did not want to be a farmer.

When I was about 10 years old  
My father moved to Indiana and established  
himself in a little cross roads village  
called Allensville, on the road from  
Rising Sun to Vevay. Here he kept  
a Country Store - was Postmaster, and  
had a small shoemaker's shop in which  
one man was employed. I learned  
something of shoemaking - had some  
experience in keeping store, and  
incessantly, came across a book - I have  
forgotten its title - which had a number  
of Latin quotations in it, asked a young  
Clergyman (John C Bonham) how I could  
learn Latin - and got a Latin Grammar and  
Reader - a copy of Caesar, and a Latin  
Dictionary and set to work.

It was difficult - but with the aid of Mr Bonham  
I made good progress. Then I made an agreement  
with my father that if he would help me through  
College in the least expensive way, all of his  
property should go to my sister and that I  
must expect nothing more. I then got some  
Greek books, a geometry &c and went on to fit  
myself to pass the entrance examination for the

Sub Freshman class at Miami University  
Ox Bow Ohio. I succeeded in doing this in  
a year - and passed the examination in the Fall  
of 1852. For the first two years I kept  
Bachelor Hall, living on bread, milk, potatoes, eggs  
ham etc - such things as I could cook for  
myself. The lessons gave me little trouble, most  
of my time was spent in reading the books in the  
College Library. I was omnivorous, read everything  
in English as it came. Philosophy, Theology,  
Natural Science - History Travels and Fiction.

JOHN SHAW BILLINGS CENTENNIAL

*In this portrait, painted by Cecilia Beaux in 1895, Dr. Billings wears the gown of a Doctor of Civil Law of Oxford. The painting hangs in the Reading Room of the National Library of Medicine.*

## THE MEDICAL LIBRARIAN AND BIBLIOGRAPHER <sup>1</sup>

The gravitation of John Billings to books was as inevitable and as certain as any law of nature. It was equally certain that, given access to books, he would know their contents, use them, and introduce others to their solace and help. Detailed to the Surgeon General's Office and finding no library, he made one.

That he and no one else was founder of the national medical library needs no discussion after reading the following letter, printed in *The Medical Record*.<sup>2</sup>

WASHINGTON, February 3, 1880.

To the Secretary of the Medical Society of the County of New York:

DEAR DOCTOR: As my attention has several times been called to the communication by Dr. Wm. A. Hammond relative to the library of this office, read at the annual meeting of the Society, October 27, 1879, and more especially to the report of this communication given on page 472 of the *New York Medical Record* for November 5, 1879, with requests for explanations, I deem it proper to make a statement on the matter to the Society.

From the report in the *Record*, some have inferred that I claim to have been the founder of the National Medical Library, although the letter of Dr. Hammond as printed on page 40 of the minutes of the meeting, makes it very plain that I have made no such claim.

The facts of the case are simply as follows:

For many years there was a small collection of medical books and journals in the Surgeon General's Office at Washington, which collection was commenced by Surgeon General Lovell prior to 1836.

At the commencement of the war this collection amounted to between three and four hundred volumes.

Dr. Hammond entered on his duties as Surgeon General April 28, 1862, and left Washington August 30, 1863, after which date he was not on duty in this office. During this interval three hundred and fifty-nine volumes were purchased for the use of this office, the principal works being a set of the *Annales d'Hygiene* and a set of the *Boston Medical and Surgical Journal*. During the years 1864 and 1865, about 1,000 volumes were added to the library, mainly selected by Drs. Woodward and Otis.

When the library came under my charge, in the fall of 1865, it contained, as shown by a catalogue made at the time, about 1,800 volumes. At this date it contains about 50,000 volumes and 60,000 pamphlets.

Very respectfully and truly yours,

JOHN S. BILLINGS,  
Surgeon, U.S. Army.

## JOHN SHAW BILLINGS

Dr. John Shaw Billings was an outstanding figure in American medicine and public affairs from the mid-1860's until his death in 1913. He achieved an international reputation as physician, librarian, bibliographer, statistician, educator, hospital planner, and sanitarian. His accomplishments won him honorary degrees from Edinburgh, Oxford, Munich, Budapest, Dublin, and Harvard, and membership in many learned societies.

Born in Indiana in 1838, Billings obtained his early education chiefly through reading. After graduating from Miami University at Oxford, Ohio, in 1857, he attended the Medical College of Ohio at Cincinnati where he earned his M.D. degree in 1860. He joined the U.S. Army Medical Corps in 1862 through competitive examinations in which he made a brilliant record. He organized Army hospitals in Washington, D.C., and saw field service at Chancellorsville and Gettysburg. In 1864, he was assigned to the Surgeon General's Office in Washington, D.C., to organize medical records of the Union Army. In 1865, he was placed in charge of the Library of the Surgeon General's Office, and he devoted the next 30 years to building this institution into a national resource. This year marks the 100th anniversary of that assignment.

On the occasion of his retirement in 1895, 259 physicians from Great Britain and America sponsored a testimonial dinner at which Dr. Billings was presented with a silver box containing a check for \$10,000. That box and his portrait, painted in oil by Cecilia Beaux of Philadelphia, are now in the National Library of Medicine. (The painting hangs in the Reading Room.) After leaving the Library and the Army, Dr. Billings became professor of hygiene at the University of Pennsylvania and subsequently was appointed Director of the New York Public Library.

When the National Board of Health was given quarantine powers and responsibility for reporting on diseases, Dr. Billings served for four years (1879-82) as vice president and was, effectively, director of the Board. In this post, he succeeded in obtaining from the Congress a \$500,000 appropriation—remarkably large for those days—to aid States and localities in dealing with epidemics. With these funds, he launched the first Federal grants-in-aid research program. He also devised a system by which Federal grants could be awarded to competent authorities, many of whom were university professors, for "special scientific investigations," including studies relating to air pollution, food and drug adulterations, and infectious diseases such as yellow fever, diphtheria, and malaria.

### Helped Plan Hospitals

From the Civil War on, Dr. Billings was regarded as an authority on hospital construction. He was medical advisor to the trustees of the Johns Hopkins Hospital, recommended the selection of William H. Welch and

William Osler for the faculty, laid out the plans for the building, and was highly influential in guiding the institution to a position of leadership in the reform of American medical education. He also participated in planning the buildings of six other institutions: the Barnes Hospital (Soldiers' Home, Washington, D.C.), the Army Medical Library and Museum, the Laboratory of Hygiene and the William Pepper Laboratory of Clinical Medicine of the University of Pennsylvania, the New York Public Library, and the Peter Bent Brigham Hospital in Boston. Besides being one of the original incorporators of the Carnegie Institution of Washington in 1902, he served as Chairman of the Board of Trustees for 10 years. His proposal for the consolidation of New York's many free circulating libraries with the New York Public Library led to the establishment of the famed Carnegie libraries, in whose planning he directly assisted Mr. Andrew Carnegie.

Dr. Billings' achievements were many and varied, but the most important was his creation of the National Library of Medicine. While preparing his doctoral thesis, Billings discovered that no library in the country had the literature he needed for his research. After the Civil War, Billings set about remedying this defect. At the Library of the Surgeon General's Office, his major contributions were:

(1) *Building a collection.* Founded in 1836, the Library of the Surgeon General's Office comprised only 2,253 volumes in 1865. By 1873, there were about 25,000 volumes and 15,000 pamphlets. In 1895, when Billings retired from the Army, the collection totaled 116,847 books and 191,598 pamphlets. Today the National Library of Medicine is the world's largest depository of biomedical literature.

(2) *Index-Catalogue.* To save medical teachers and researchers the drudgery of consulting thousands of incomplete indexes, Billings decided to compile a single, comprehensive reference to the Library's collection which would index all journal articles under subject and, in turn, catalog all separate monographs, pamphlets, theses, and serial titles under author and subject. The first volume of the *Index-Catalogue* appeared in 1880; the first series, consisting of 16 volumes, was completed in 1895. As a guide to the literature of medicine of its time and before, it remains unsurpassed. William H. Welch considered it the most important American contribution to medical science in the 19th century. This was reaffirmed last year by the distinguished head of the Royal Society of Medicine Library in London.

(3) *Index Medicus.* Realizing that a publication as exhaustive as the *Index-Catalogue* could not be kept current, Dr. Billings established the *Index Medicus* in 1879 as a monthly, classified index to current periodical literature, with a detailed, annual author and subject index. Although there have been various changes in format since its beginning, this volume is the direct ancestor of the National Library of Medicine's *Index Medicus*.

## Worked on Census

Dr. Billings also had a leading role in the development of vital statistics in connection with the U.S. Census from 1880 to 1910. Indeed, he delighted

in statistics as such and is credited by his biographer, Dr. Fielding H. Garrison, and also by the *Dictionary of American Biography* with being the progenitor of the modern tabulating machine.

"In 1880," Garrison says, "Dr. Billings suggested that the various statistical data of the living and the decedent 'might be recorded on a single card or slip by punching small holes in it, and that these cards might then be assorted and counted by mechanical means according to any selected group of these perforations.'

"This suggestion was taken up and applied by Mr. Herman Hollerith in the electrical counting and integrating machines which are now used by the United States Census."

In its article on Hollerith, the *Dictionary of American Biography* states that the inventor gave Dr. Billings the credit for suggesting the idea and offered him a share in the Tabulating Machine Company which Hollerith started and which eventually grew into the International Business Machines Corporation.

Another modern development that can be traced back to the punchcard idea is MEDLARS, the Library's computer-based information storage and retrieval system. MEDLARS is used to index the literature and prepare various bibliographic guides, including the monthly *Index Medicus*, first produced by Dr. Billings.

As a young military surgeon, armed with uncommon vision and determination, John Shaw Billings set out 100 years ago to transform the small Surgeon General's library into a major research resource for physicians, scientists, and educators throughout the country. He succeeded beyond his fondest expectations as reflected by the National Library of Medicine today.

Dr. Billings was a true pioneer of American medicine.

The vigor with which the Billings tradition is being carried forward by the National Library of Medicine is a happy augury for the future of medical communications.

LUTHER L. TERRY, M.D.

JOHN SHAW BILLINGS CENTENNIAL

This exhibit is presented in connection with the John Shaw Billings Centennial, June 17, 1965, in commemoration of the 100th anniversary of Dr. Billings' appointment as head of the Library of the Surgeon General's Office, U. S. Army.

The Library takes pleasure in acknowledging its indebtedness to the New York Public Library for its generous assistance, which made possible the preparation of this exhibit. For other gifts, loans, or courtesies, the Library wishes to thank John Shaw Billings, II, Dr. Jean A. Curran, Colonel Robert Fletcher, and Dr. C. J. Maloney; the Carnegie Institution of Washington, International Business Machines Corporation, Library of Congress, Medical Museum of the Armed Forces Institute of Pathology, National Archives, and Smithsonian Institution.

## CASE I

### Education

Born in Indiana in 1838, Billings was graduated from Miami University in Oxford, Ohio, in 1857. He earned his M.D. degree in 1860 from the Medical College of Ohio in Cincinnati.

1. Miami University. Oxford, Ohio.  
Diploma, Bachelor of Arts degree, 1857, awarded to JSB.
2. Medical College of Ohio. Cincinnati.  
Diploma, M. D. degree, 1860, awarded to JSB.

Nos. 1-2: Gift of John Shaw Billings, II

### Civil War Service

Although offered an assistantship to a leading surgeon in Cincinnati, Billings declined when the Civil War broke out. After an examination in which he took top honors, he was commissioned an assistant surgeon in the regular army in April 1862. Dr. Billings won a high reputation in the field as a very skillful and original operative surgeon of great courage and resourcefulness. After the disastrous battle of Chancellorsville, he conducted the retreat of the wounded; at Gettysburg in July 1863, he and his assistant surgeons cared for and fed between 700 and 800 wounded. Billings performed various operations, sometimes working all day and all night.

## CASE II

### U.S. Marine Hospital Service

Late in the 1860's, the Secretary of the Treasury called on Billings to inspect and recommend an over-all organization for the scattered, federally financed Marine Hospitals. Started by President John Adams in 1798 to care for merchant seamen, these hospitals had been taken over by the Union and Confederate armies during the Civil War. Billings visited them all and recommended military organization, a merit system, and construction changes. The plan was to rehabilitate the hospitals and put them for the first time under a Supervising Surgeon General.

Billings, whose ideas were incorporated into the law which established the Marine Hospital Service in 1870, soon found himself in competition with Dr. John M. Woodworth for the job of Surgeon General. However, Congress ruled that the Service must be headed by a civilian. Having won the appointment, Dr. Woodworth proceeded to organize a national quarantine system and a publication for reporting epidemics from abroad. From these the Service grew.

20. Boutwell, George S., Secretary of the Treasury. February 26, 1870.

#### U.S. National Board of Health

On March 3, 1879, under the stimulus of a yellow fever epidemic, and with the active cooperation of the American Public Health Association, Billings got Congress to set up a National Board of Health. For three years he ran the Board in a precedent-setting way. He initiated a program of grants-in-aid to states, counties, and cities, mainly to fight yellow fever. He instituted grants to colleges in support of research on food adulteration, air and water pollution, and sanitary engineering. The Board made sanitary surveys of port cities. It sent to Havana a Yellow Fever Commission whose studies helped start the research chain that led to the mosquito as vector. The Board took the Marine Hospital Service's quarantine and foreign disease reporting posers. But following Dr. Woodworth's death, the second Surgeon General, Dr. John M. Hamilton, obtained the Board's appropriation for fighting disease. Shortly thereafter, Billings resigned from the National Board of Health, which soon died from lack of Congressional support.

25. The Mascot. New Orleans, August 5, 1882.  
Cover cartoon depicting members of the National Board of Health slinging mud at a woman, symbolizing the city of New Orleans.

Nos. 25-26: Lent by New York Public Library

CASE III

Surgeon General's Office Library

In December, 1864, Billings was ordered to the Surgeon General's Office, and in 1865 he acquired unofficial custody of the library. There he carried out his greatest achievement: creation of a national medical library. By using a fund of about \$85,000 turned in from savings by the hospitals after the war, and by energetic solicitation of gifts and exchanges, Billings enlarged the library from 2,253 volumes in 1865 to 116,847 bound volumes and 191,598 pamphlets in 1895, when he retired. He made the riches of this collection available in one comprehensive, author-subject Index-Catalogue of both monographic and periodical literature, and created the Index Medicus as a monthly classified index to current periodical literature.

of Pathology, Medical Museum

CASE IV

The Johns Hopkins Hospital

From the time of his celebrated report on the barracks and hospitals of the U.S. Army (1870), Billings had been especially interested in hospital construction. In 1875, his plans for the Johns Hopkins Hospital were selected by the trustees from five proposals that had been submitted. In contrast to existing American practices, Billings specified that the administration should be under a single head, based on a military plan; that clinical instruction, with the exception of surgery, should be given in the wards and out-patient department rather than in a clinical amphitheater; that there should be graded accommodations for patients of different means; that a system of financial, historical, and clinical records should be maintained, and that reports on original scientific work should be published annually. Billings was highly influential in guiding the institution to a position of leadership in the reform of American medical education. The hospital opened May 7, 1889, and was soon recognized as the finest of its kind.

#### Hollerith Tabulating Equipment

Billings is also credited with being the progenitor of the modern tabulating machine. His suggestion that the various statistical data of the living and the decedent "might be recorded on a single card or slip by punching small holes in it, and that these cards might then be assorted and counted by mechanical means according to any selected group of these perforations" was taken up and applied by Mr. Herman Hollerith, who invented the tabulating equipment used by the Census. The inventor gave Billings credit for the idea and offered him a share in his Tabulating Machine Company, which eventually grew into the International Business Machines Corporation.

66. Hollerith early tabulation equipment, including tabulating machine, key punch, and sorting box.  
Through the medium of punched cards and these machines, the U.S. Census of 1890 was counted--the first population count of a great nation made by other than manual means.

### Building Plans

In addition to the Johns Hopkins Hospital, Billings participated in planning the Barnes Hospital of Soldiers' Home, Washington, D.C. (1873), the Laboratory of Hygiene (1892) and the William Pepper Laboratory of Clinical Medicine (1895) in Philadelphia, the Peter Bent Brigham Hospital in Boston (1913), the City Hospital at Memphis (1897), the Army Medical Museum and Library (1887), and the New York Public Library (1911).

### J. S. Billings vs. the United States

Billings had his problems with red tape. Although under orders to tour Europe on behalf of the Office of the Surgeon General in 1881 and 1884, the Treasury Department did not recognize the trips as official, and Billings had to repay his expense allowance.

74. U.S. Court of Claims.

CASE VI

Honors and Awards

From the mid 1860's until his death in 1913, Dr. John Shaw Billings was outstanding in American medicine and public affairs. He achieved an international reputation as physician, librarian, bibliographer, statistician, educator, hospital planner, and sanitarian. His accomplishments won him honorary degrees from Edinburgh, Oxford, Munich, Budapest, Dublin, and Harvard, and membership in many learned societies. In 1895, 259 physicians from Great Britain and America sponsored a testimonial dinner at which Dr. Billings was presented with a silver box containing a check for \$10,000. That box and his portrait are now in the National Library of Medicine.

#### New York Public Library

In 1895, the three great New York libraries, the Astor Library, the Lenox Library, and the Tilden Trust, were united to form the New York Public Library. Billings was appointed Superintendent-in-Chief. He resigned his professorship at the University of Pennsylvania on June 1, 1896; from then until his death he was in charge of the new library. Billings planned the building still standing at 42nd Street and Fifth Avenue, and organized the collections and administration of the library.

Carnegie Institution of Washington

Besides being one of the original incorporators of the Carnegie Institution of Washington in 1902, Billings served as Chairman of the Board of Trustees for 10 years. His proposal for the consolidation of New York's many free circulating libraries with the New York Public Library led to the establishment of the famed Carnegie libraries, in whose planning he directly assisted Mr. Andrew Carnegie.
